Arrive in Reno from San Francisco at 7 A. M.

GOING NORTH.

Hammond & Wilson's stage leaves for Susanville at 3 A. M.; returning at 6 P. M. Fare \$12.

OUR PUBLIC SCHOOLS.

We find the annexed in the Watsonville *Pajaronian* of a late date. Much of it is worth remembering:

The Public Schools of our country are institutions of which every American citizen should feel proud, and all should feel it a duty to protect and foster them with the utmost care; guard their privileges with the greater vigilance, and resent any slur cast upon them.

Next to the home circle, they are the most sacred of all our institutions, and its influence in after life is felt with the same force and its scenes are recalled with the same fond affection as are those of home. Both are so intimately blended that it is impossible to separate them. You cannot recall the associations of one without the scenes of the other rising to the mind like a companion picture. On the school as well as on the home, devolves the task of training and directing the minds and aims of childhood. If, as is unfortunately the case too often, a parent should through excess of affection overlook faults and misdeeds in a child, a teacher unbiased by any such considerations or feelings and with a clearer judgment should at once correct it, and by their example and influence counteract any vicious impressions left on a child's mind by a lack of discipline at home. This sounds as if we would transfer to the teachers of our schools the task of raising our families. But with the second thought all will see we are right. Parents, more especially mothers, are more or less swayed by the intense uncontrollable affection they bear for their young, and although their better judgment may point out, and their common sense convince them they are doing wrong and committing a positive injury to the child, yet the dread of inflicting pain on one they love so passionately prevents them from punishing it. From the home circle to the school-room, the transition, in the mind of the child, is the most natural in the world. Finding he has so much authority at home, he at once tries to exercise it at school. And right here the influence of the teacher tells with the greatest effect. Disobedience, gently corrected, without an excessive show of anger or affection, will at once convince a child that it has done wrong, and let it be assured that it will be punished every time it does wrong, and you will be surprised to find how few and far between the punishments will happen. Above all never let a teacher lose his or her self respect so far as to make an exhibition of bad temper, as it is apt to lead a child to consider its punishment too great for the act committed, and what is more, no person who loses his temper is fit to correct a child. One of the highest qualifications required of any one aspiring to the position of teacher in our Public Schools, should be under perfect self-control. I know this would be a severe test. There never was a truer saying than "it is easier to command armies than to command our passions." But let it be once understood and strictly enforced, then an exhibition of temper before a school or class will be sufficient grounds for dismissal, and it will not be long before you can see a great improvement. A child, though a very small atom of humanity, is very

observant, and will read with wonderful precision the failings and perfections of those placed above it. The greatest talent, the brightest intelligence, and the most splendid education, without self-control, is utterly worthless and pernicious in a teacher.

And there is another matter which deeply concerns all parents and guardians of the young, and which seems to be growing worse and worse every year, and that is the cramming process. It is wonderful how many books a child of fourteen can go through, and how little they will know at sixteen. The old simile of the sieve is about as appropriate as anything I can think of to meet it. In my opinion no child under fifteen years of age should be allowed to go beyond the five courses: Spelling, reading, writing, grammar and arithmetic. These are the foundation of the English language and should be fully understood before attempting any higher branches. It is far more creditable both to the pupil and teacher to leave school able to read in a clear intelligible tone, spell the words they would wish to write, write in a clear clean hand, do the common run of business figures, and tell a verb from a pronoun, than to have a smattering of drawing, music, French, Spanish, history and philosophy. You try to cram all this into a child's head and it becomes confused and bewildered; it is beyond its depth; it founders along trembling and in terror, racks its poor brain to commit it to memory, and fails. The teacher gets angry, scolds and punishes the helpless culprit for being stupid and obstinate, when it is an utter impossibility for the child to learn it. The natural consequence is the child becomes careless and pays no attention to easier matters. Three fourths of the pupils in our schools will leave it to follow some mercantile or mechanical pursuits, and will never need these fancy accomplishments.

The Pyramids

The immense stones used in the erection of the Pyramids of Egypt were obtained from the quarries in the Arabian hills, and were carried to the river, and over a bridge of boats. They were then brought forward by means of a cat-way, which of itself took ten years to construct, and which is said to have been a fine work with its polished stones and figures of animals engraved upon them. One hundred thousand men were employed at a time, and these were relieved by the same number at the end of three months. A long time was spent in the leveling of the rock on which the edifice stands, and twenty years for the erection of the pyramid itself. The stones were raised step by step by means of a machine made of short pieces of wood, and, last of all, commencing from the top, the stones were cemented together with a layer of cement not thicker than a piece of paper, the strength of which is proved by the age of these enormous memorials.

Down in a Coal Mine.

The difficulty of obtaining coal at greater depths than those now reached is more formidable than is commonly supposed. It is well known that at a depth of fifty feet below the surface of the earth English geologists mark a zone of equable temperature, the thermometer there showing 50 degrees. Observation shows, too, that this temperature increases at the uniform rate of 1 degree for every 55 feet; so that at the depth of 1,700 feet the temperature is about 78 degrees. One mine in England, 1,649 feet deep, is, it is stated, already worked to great disadvantage, owing to the inability of the miners to endure the steady heat. In the colliery the shaft is 2,375 feet deep, and the temperature is 68 degrees, or blood heat, and there prolonged labor is impossible. The limit of profitable mining, therefore, is believed to be about 1,700 feet, and at 1,000 additional feet mining is impracticable. At the depth of 1,000 feet the temperature would, according to this, be not less than 122 degrees, and at 10,000 feet it would be at the boiling point, if not higher.

CHARACTER OF LIFE.—Lay your finger on your pulse and know that at every stroke some immortal passes to his Maker; some fellow-being crosses the river of death; and if we think of it we may well wonder that it should be so long before our turn comes.

Half of all who live die before seventeen years. Only one person in ten thousand lives to be 100 years old, and but one in a hundred reaches 60 years.

The married live longer than the single.

There is one soldier to every eight persons, and out of every thousand born 95 weddings take place.

"I NEVER can enjoy poetry while I'm cookin'," said an old lady; "but when I step out to feed the hogs, and listen myself on the fence, and throw myself into a few lines of 'Cap'n Jinks,' it does seem as if this airth was made to live on, after all."

[Opposite Masonic Hall.]

I am not about to defend gambling, but merely to prove that all the world are gamblers.

The most reckless gambler of all is the legislator, who speculates so largely on human interest, and often stakes national prosperity against some petty interest.

Life itself is a game of chance. The very axiom "Nothing is certain," disproves even the certainty or nothing being certain. The very machinery of the firmament is a sublime game of billiards, in which the stars are the balls, and the cues the centrifugal and centripetal forces.

Every dinner is a game of chance—it may choke you on the spot, or else you may never live to digest it. What matters it if a man be killed by an active mad bull or a bit of passive beef?

But gambling reaches its climax in marriage. Rouge et noir is never so dangerous as when they represent the cheeks and eyes of beauty. Marriage is dipping in the lucky bag in which, out of a hundred ninety-nine are snakes to one eel.

Even Agriculture is gambling; it is risking one potato in that great faro bank, the earth, to gain a bushel. Grains of wheat are dice, and the farmer who reaps a good harvest is an enormous gambler.

Commerce comes under the same penalty. Every mercantile firm is illegal, whether it gains or loses.

Even the drama is a gambler. What manager can be sure that his new tragedy may not be a broad farce, and kill half the audience with laughter.—John Brougham, in *Illustrated Weekly*.

There is a young lady in Fauquier county, Virginia, who is beginning to understand "What's in a name." She has a lover who adores her, and the only bar to their union is the fact that he hasn't any name for which she can exchange hers after that custom of the country which Susan and her friends anathematize. He was orphaned in early infancy and the names of his parents slipped out of the minds of those who took care of him; and although they gave him a Christian name, they didn't exactly like to invent a surname, and he grew up without one. He sought relief from the courts, but the lawyers argued that they could do nothing for him; a court could change a name, but he hadn't any name to change. He has applied to the Legislature for the passage of a bill giving him a name. The day he is named the wedding day will also be named.

JUST RECEIVED AND TO ARRIVE.
